

## OpenAI o1 (Pure Text)

The identified lesion is located in the **peripheral zone**, appearing as a **non-circumscribed**, ill-defined area with focal low signal on T2-weighted imaging and restricted diffusion (bright on high b-value DWI, low on ADC). Measuring **approximately 1.0 cm**, it does **not exceed 1.5 cm in maximal dimension**. **No clear signs of extracapsular extension, seminal vesicle invasion, or adjacent organ invasion** are observed on these limited views. Based on these characteristics, the lesion is assigned a **PI-RADS score of 4**.
